Baldwin Safety and Compliance Partners with JumpSeat for Crowdsourced Airport Intel Missed by NOTAMS

Hilton Head Island, SC – May 12, 2022 — Baldwin Safety and Compliance announced it has partnered with JumpSeat to integrate the real-time crowdsourced application into the Baldwin flight risk assessment tool. Introduced last year, the JumpSeat app is currently free to users and a first of its kind to allow pilots to share and access important operational information that may not be addressed in a formal NOTAM and will save crews the time needed to research multiple sources.

Jason Starke, Director of Safety at Baldwin Safety and Compliance commented, "The JumpSeat app caught our attention immediately and we recognized its value as another dimension to the risk assessment process. Now we can make it even easier for our clients to access local intelligence at their departure and destination airports from the Baldwin system to help make more informed decisions regarding risk associated with their trip. It is simple to use and as the user numbers go up, the more valuable it will become. I see it as a must-have resource for every trip."

JumpSeat co-founders Ben Zavadil and Bradley Doebelin worked together to develop a first of its kind crowdsourced aviation app that now has several thousand users. The intuitive app allows users to search by airport using a map and offers a global events feed with favorites section on the menu to quickly check frequent locations in real-time. Reports are made quickly by choosing a category such as ATC, Runways, Fuel, Ground Handling, Scams, Weather, and others.

"Our goal was to keep this app simple and easy to use," stated Ben Zavadil, JumpSeat co-founder. "We knew this would help crews avoid issues not reported in NOTAMS and it has exceeded expectations while saving them valuable time with risk assessment research." Bradley Doebelin JumpSeat's co-founder added, "We are excited to have Baldwin as our first JumpSeat partner and look forward to working with them to explore additional segments in the industry as well as other like-minded business aviation organizations."

About Baldwin Safety & Compliance
Since 2004, Baldwin Safety & Compliance, a visionary in safety management, has supported global transportation organizations by crafting scalable and intuitive safety systems and related business support and training products designed specifically for their operations and resulting in positive safety cultures. Supported by a team of experienced and credentialed aviation safety professionals available 24/7, Baldwin supports all facets of transportation and conforms to ICAO, FAA, EASA, Transport Canada, and other State standards and regulatory requirements. About JumpSeat

JumpSeat was launched in 2021 and is an iOS application that uses crowdsourced information about airports operations and conditions around the world that may not be included in formal NOTAMS. As a social driven source for operational intelligence that you won't find anywhere else, JumpSeat is an easy way to share real-time information with the world with a few clicks. Download the app for free at the Appstore at JumpSeat Ops or learn more at www.jseat.com.
